1 Deadlines (Anywhere on Earth)

Event	Date
Abstract registration	May 16, 2026
Full paper PDF upload	May 23, 2026
Notification	August 7, 2026
Camera-ready	August 20, 2026

Official: <https://cikm2026.diag.uniroma1.it/submit/>
Full track CFP: <https://cikm2026.diag.uniroma1.it/full-research-papers/>
EasyChair: <https://easychair.org/my/conference?conf=cikm26>

2 Official paper template

CIKM requires the **ACM Master Article Submission Template** (2-column), not a custom CIKM .tex file.

- Download: <https://www.acm.org/publications/proceedings-template>
- LaTeX class: `acmart`, proceedings option: `sigconf`
- Repository manuscript: `paper/main_acmart.tex`

Review-oriented preamble:

```
\documentclass[sigconf,anonymous,review]{acmart}
\setcopyright{none}
\settopmatter{printacmref=false}
```

Page limit: at most 10 pages including figures, tables, and appendix content, plus up to 2 additional pages used only for references. Overlength papers are desk-rejected.

3 Abstract registration (May 16)

Checklist

1. EasyChair track: **CIKM 2026 Full Research Track**.
2. Enter final **author names and affiliations** (frozen after May 16).
3. Paste title and abstract from `paper/abstract_easychair.txt`.
4. Keywords: retrieval-augmented generation; provenance; benchmarking; near-duplicate retrieval; evaluation.
5. Nominate at least one author as reviewer (required).
6. If a public preprint exists, use a distinct title and abstract on the archive versus CIKM (double-blind policy).

File	Purpose
<code>abstract_easychair.txt</code>	Paste into EasyChair
<code>abstract_submission.pdf</code>	Personal copy

4 Full paper upload (May 23)

Avoid desk rejection

- Upload `main_acmart.pdf` in ACM 2-column format.
- Double-blind PDF: no names, affiliations, acknowledgments, or identifying URLs.
- Third-person self-citations only.
- Respect page limits.
- Authorship unchanged since abstract registration.
- Reviewer nomination completed at abstract stage.
- Work not concurrently under review elsewhere.

Build PDF

Overleaf (recommended): Upload `paper/overleaf_bundle/` (create with `bash scripts/package_overleaf.sh`). Set main file `main_acmart.tex`. Compile with pdfLaTeX + BibTeX.

Local: Full MacTeX/TeX Live with `acmart` dependencies:

```
cd paper
pdflatex main_acmart.tex && bibtex main_acmart
pdflatex main_acmart.tex && pdflatex main_acmart.tex
```

Reproducibility (optional anonymous GitHub link in paper):

```
bash scripts/reproduce_full.sh
python -m provbench_rag.scripts.export_paper_artifacts
```

5 Repository map

Path	Role
<code>provbench_rag/</code>	Code: schemas, PACER, BM25, metrics
<code>corpora/annotations/</code>	JSONL datasets
<code>results/</code>	Metrics and table fragments
<code>scripts/</code>	Reproduction shell scripts
<code>paper/</code>	Manuscript and submission PDFs
